SAMBUTAN MENTERI PENDIDIKAN DAN KEBUDAYAAN

Peningkatan mutu sumber daya manusia yang dilakukan secara berencana, terarah, dan terkoordinasi merupakan syarat mutlak bagi suatu negara untuk meningkatkan pembangunan di segala bidang. Sejalan dengan itu, seperti yang tercantum dalam Undang-Undang Nomor 2 Tahun 1989, pendidikan nasional ditujukan untuk mencerdaskan kehidupan bangsa dan mengembangkan manusia Indonesia seutuhnya. Selain beriman dan bertaqwa terhadap Tuhan Yang Maha Esa serta sehat jasmani dan rohani, ditegaskan pula bahwa manusia Indonesia seutuhnya itu juga harus memiliki pengetahuan dan keterampilan. Dengan penegasan demikian berarti peningkatan kualitas sumber daya manusia itu haruslah dilakukan dalam konteks peningkatan pengetahuan dan keterampilan. Peningkatan pengetahuan dan keterampilan itu sendiri pada gilirannya identik dengan penguasaan ilmu pengetahuan dan teknologi (iptek).

Dalam upaya penguasaan ilmu pengetahuan dan teknologi itu, faktor bahasa mempunyai peranan yang sangat penting. Karena konsep-konsep iptek itu sendiri sebagian terbesar masih tertulis dalam bahasa asing, khususnya bahasa Inggris. Oleh sebab itu, tingkat penguasaan iptek yang diperlukan dalam pembangunan dapat dikatakan berbanding seajar dengan tingkat penguasaan bahasa asing tersebut.

Namun demikian, kondisi masyarakat Indonesia dewasa ini memperlihatkan kenyataan bahwa yang menguasai bahasa asing (baca: bahasa Inggris) itu jumlahnya sangat tidak berarti jika dibandingkan dengan jumlah penduduk Indonesia secara keseluruhan. Kenyataan itu merupakan kendala, baik terhadap upaya pemanfaatan dan pengembangan iptek itu sendiri, maupun terhadap upaya peningkatan kualitas sumber daya manusianya. Oleh karena itu, konsep-konsep iptek yang masih

tertulis dalam bahasa asing itu perlu segera disebarluaskan pengertiannya dengan menggunakan bahasa yang dapat dipahami oleh rata-rata anggota masyarakat Indonesia, yakni bahasa Indonesia.

Akan tetapi, harus disadari pula bahwa upaya penyebarluasan konsep-konsep iptek itu sendiri tidaklah mudah dilaksanakan, terutama karena dalam bahasa Indonesia belum cukup tersedia istilah-istilah yang diperlukan. Akibatnya, penuangan konsep-konsep iptek itu melalui penulisan berbagai karangan ilmiah dalam bahasa Indonesia menjadi makin tertinggal dari perkembangan dan kemajuan ipteknya itu sendiri. Itulah sebabnya, maka melalui kerjasama dengan Malaysia sejak tahun 1972 dan kerjasama yang diperluas dengan Brunei Darussalam sejak tahun 1985, pakar-pakar iptek Indonesia yang mewakili perguruan tinggi-perguruan tinggi dan pusat-pusat penelitian, memberikan bantuan keahliannya kepada usaha Pusat Pembinaan dan Pengembangan Bahasa, Departemen Pendidikan dan Kebudayaan, dalam menyusun istilah-istilah iptek, khususnya untuk bidang matematika, biologi, fisika, dan kimia.

Saya menyambut gembira diterbitkannya hasil yang telah dicapai dalam upaya penyusunan istilah-istilah iptek itu dalam bentuk glosarium seperti ini. Saya percaya, melalui terbitan yang berisi daftar istilah atau glosarium untuk masing-masing bidang ilmu ini, upaya penyebarluasan konsep-konsep iptek dapat lebih berhasil-guna. Lebih dari itu, penerbitan demikian ini memperlihatkan pula dengan jelas rentangan benang merah antara pembakuan peristilahan di satu pihak dan peningkatan sumber daya manusia di pihak lain.

Mudah-mudahan **Glosarium Kimia** yang diterbitkan dalam rangka Kongres Bahasa Indonesia VI ini tidak saja bermanfaat bagi para ahli, pengajar, dan mahasiswa di bidang ilmu yang bersangkutan, tetapi juga bagi masyarakat pemakai pada umumnya.

KATA PENGANTAR
KEPALA PUSAT PEMBINAAN DAN PENGEMBANGAN BAHASA

Upaya pengembangan bahasa Indonesia diarahkan agar bahasa yang berfungsi sebagai bahasa negara dan bahasa nasional itu dapat digunakan sebagai sarana komunikasi yang efektif dan efisien, antara lain, dalam pemanfaatan dan pengembangan ilmu pengetahuan dan teknologi modern. Salah satu syarat utamanya ialah adanya perangkat peristilahan yang memadai.

Melalui wadah kerja sama antarnegara Mabbim (Majelis Bahasa Brunei Darussalam-Indonesia-Malaysia), Pusat Pembinaan dan Pengembangan Bahasa, dengan bantuan para ahli dari pelbagai perguruan tinggi dan pusat penelitian di Indonesia, telah menyusun istilah matematika, biologi, fisika, dan kimia serta menerbitkannya secara serentak dalam bentuk daftar istilah atau glosarium yang komprehensif untuk masing-masing bidang ilmu itu.

Dengan diterbitkannya glosarium itu, diharapkan agar hasil pembakuan peristilahan yang telah dicapai selama ini dapat dimanfaatkan oleh kalangan pemakai yang lebih luas dalam, misalnya, penyusunan buku teks, makalah, atau karangan ilmiah lainnya.

Buku **Glosarium Kimia** ini pun diharapkan dapat memenuhi harapan masyarakat pemakainya. Saran-saran perbaikan dari para pemakai buku ini untuk penerbitan berikutnya kami nantikan. Akhirnya, kepada Dr. A. Hadyana Pudjaatmaka yang telah mencurahkan tenaga, pikiran, dan keahliannya sebagai penyunting buku ini, kami sampaikan terima kasih dan penghargaan yang setinggi-tingginya.

PRAKATA

Glosarium ini tidak terlepas dari kegiatan Majelis Bahasa Brunei Darussalam-Indonesia-Malaysia (Mabbim) dan Panitia Kerja Sama Kebahasaan (Pakersa) yang mempersiapkan bahan untuk Mabbim dan menindaklanjuti keputusan Mabbim. Setelah 15 tahunan bersidang dan bermusyawarah akhirnya Mabbim memutuskan untuk membenahi peristilahan keempat ilmu dasar: Matematika, Fisika, Kimia, dan Biologi.

Dalam Bidang Kimia, seperti lazimnya, terdapat lima subbidang utama: Kimia Organik, Kimia Anorganik, dan Biokimia sebagai subbidang sistemik; Kimia Fisika sebagai subbidang asas, serta Kimia Analisis sebagai subbidang metode. Kemudian ada beberapa subbidang yang lebih kecil: Kimia Inti dan Radiokimia (sebagai pecahan Kimia Fisika), Geokimia (pertemuan antara Kimia dan Geologi), Kimia Polimer, dan sejumlah Kimia Terapan yang lain.

Pada waktu itu Pusat Bahasa telah menerbitkan Kamus Kimia Organik dan Kamus Kimia Analisis, keduanya disusun oleh tim dari Universitas Hasanuddin, dan Kamus Kimia Fisika sedang digarap oleh tim FMIPA Universitas Gadjah Mada. Maka masuk akal bila pihak Indonesia mengusulkan agar subbidang Biokimia dibahas terlebih dulu. Sebagai penutup kegiatan dipilih subbidang Kimia Terapan sedemikian rupa agar ketiga negara dapat mempersiapkan salah satunya: Kimia Industri dan Lingkungan (disiapkan oleh Indonesia), Kimia Pangan dan Pertanian (disiapkan oleh Malaysia), serta Imunokimia dan Kimia Forensik (disiapkan oleh Brunei Darussalam). Agar semua subbidang selesai dibahas dalam jangka waktu 5--7 tahunan, maka Kimia Inti dan Radiokimia disatukan dengan Kimia Fisika, Geokimia disatukan dengan Kimia Anorganik, dan Kimia Polimer disatukan dengan Kimia Organik.

Dalam pelaksanaannya terdapat penyimpangan dari rencana. Simpangan ini disebabkan oleh pakar-pakar yang akhirnya bersedia bekerja dan karena fakta bahwa subbidang itu besar dilihat dari segi peristilahan. Demikianlah Kimia Polimer tidak sempat dibahas dengan baik sehingga dimunculkan lagi belakangan. Kimia pangan dan Kimia Pertanian berdiri sendiri-sendiri, dengan pakar yang berbeda. Sementara Kimia Pertanian akhirnya hanya berkisar pada Kimia Tanah dan Pestisida. Sebaliknya untuk memperbanyak entri, Imunokimia juga mengambil entri Kimia Farmasi, dan entri Biokimia yang belum dicakup pada

Pakersa pertama. Kemudian di Indonesia (Pakersa, tetapi tidak Mabbim) muncul Kimia Pulp dan Kertas. Munculnya subbidang Kimia Terapan ini memicu munculnya subbidang Kimia Terapan lain, yaitu Kimia Keramik, Kaca, dan Semen, meskipun akhirnya istilah Semen tidak sempat banyak dicakup.

Demikianlah Glosarium Kimia ini akhirnya mencakup istilah yang diusulkan oleh kelompok pakar dalam Pakersa dalam subbidang sebagai berikut.

Kimia Fisika, Kimia Inti dan Radiokimia

Kimia Organik

Kimia Anorganik dan Geokimia

Biokimia

Kimia Analisis

Tata Nama Kimia

Kimia Industri

Kimia Lingkungan

Kimia Pertanian

Kimia Pangan

Imunokimia

Kimia Forensik

Kimia Polimer

Kimia Pulp dan Kertas (Selulosa)

Kimia Keramik dan Kaca

Pada naskah prafinal (naskah induk) subbidang ini diberi kode. Namun, atas berbagai pertimbangan kode itu dihapuskan. Oleh karena itu, pemakai glosarium ini diharapkan kearifannya dalam memahami apa yang terjadi dalam proses pembentukan glosarium berikut ini.

Meskipun ada pakar yang cenderung meraup sebanyak mungkin istilah, umumnya pakar-pakar cenderung membuang istilah yang dirasakan milik subbidang lain. Oleh karena itu, apabila Anda merasa suatu padanan tidak tepat dalam subbidang Anda, barangkali padanan itu tepat dalam subbidang kimia yang lain.

Boleh dikatakan ada bagian dari Ilmu Kimia yang dekat dengan Fisika, dan ada yang dekat dengan Biologi. Oleh karena itu, banyak istilah satu-kata yang dapat memiliki lebih dari satu padanan.

Misalnya: *contraction* lebih tepat berarti pengerutan dalam Biokimia (seperti dalam *muscle contraction*) dan berarti penyusutan dalam Kimia Fisika (seperti dalam *field contraction*). Uraian ini sekaligus mengungkapkan bahwa telah dilakukan penyelarasan semaksimal mungkin antara padanan Matematika, Fisika, Kimia, dan Biologi.

Glosarium Kimia agak enggan untuk menggurui. Oleh karena itu, banyak istilah yang memiliki lebih dari satu padanan.

Misalnya: <i>simultaneous</i>	----	simultan, serentak
<i>harmonic</i>	----	harmonik, selaras
<i>opacity</i>	----	kelegapan, opasitas.

Terserah kepada khalayak pemakai untuk memilih padanan yang mana yang dirasakan lebih sesuai.

Glosarium Kimia ini kadang tampak kurang taat-asas, dalam arti penyeragaman tidak tuntas. Misalnya:

<i>catalytic constant</i>	---->	tetapan katalisis
<i>catalytic converter</i>	---->	pengubah katalitik

Perbedaan akhiran ini sering dibiarkan. Terserah kepada Pemakai glosarium ini akhiran mana yang disukai. Kelak mayoritas pemakai bahasa akan menentukan. Terlepas dari preferensi ini kadang ada beda halus (subtil) antara akhiran-akhirannya itu. Misalnya: masalah sintesis (*synthesis problem*) dan masalah sintetik (*synthetic problem*) dapat mempunyai beda makna, atau sekurangnya nuansa.

Glosarium Kimia ini sengaja ditekankan pada bagaimana membentuk padanan, dan bukan merupakan daftar entri Kamus Istilah. Jelasnya: setelah memaparkan bahwa padanan dari *equation* adalah *persamaan*. Daftar ini tidak memaparkan semua *X equation* (dengan *X* adalah nama pakar). Karena bagi pemakai sudah jelas bagaimana padanan *X equation* itu. Dalam Kamus Istilah banyak *X equation* akan dicantumkan sebagai entri bila sebagai konsep, entri ini penting. Contoh lain:

<i>saturated liquid</i>		tidak dicantumkan, namun dicantumkan
<i>saturated compound</i>	----	senyawa jenuh
<i>liquid</i>	----	cairan

sehingga jelas bahwa padanan istilah pertama adalah cairan jenuh.

Sejumlah pakar Kimia yang berperan serta dalam berbagai Sidang Mabbim, Sidang Pakar Mabbim, dan rapat-rapat Pakersa, maupun penyusunan berbagai kamus istilah antara lain: Prof. Dr. Achmad Amiruddin, Prof. Dr. Soekeni Soedigdo, Prof. Nur Mandysyuriah Surdia, Prof. Dr. P. Sudigdo, Prof. Dr. Djokosudarmo, Dr. A. Hadyana Pudjaatmaka, Dr. Ir. Suminar S. Achmadi, Dr. Ir. Dedi Fardiaz, Dr. Padmono, Dr. Ir. M.S. Saeni, Dr. Haryoto, Drs. Agus Taufiq, Drs. Siswandi Sudiono, dr. Ardi Kaptiningsih, dr. Budi Sampurna, Ir. Sanjaya, Ir. Wanto Edi Purwono, dan Dr. Ir. Sarwono Hardjowigeno. Berkat jerih payah

merekalah Glosarium ini berhasil disusun. Pakar Malaysia dan Brunei Darussalam pun, meskipun tidak dicantumkan di sini, berjasa juga dalam mematangkan padanan-padanan maupun pemilihan istilah. Meskipun demikian, kesalahan, kekeliruan, ketidaktepatan, dan cacat-cacat lain Glosarium ini merupakan tanggung jawab penyusun semata.
